WONJOON HWANG

Seattle, WA | Open to U.S. relocation | wjhwang0503@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

UW M.S. Data Science candidate building data pipelines, ML workflows, and applications with Python, SQL, Spark, and TypeScript. Experience spans production data-quality work, distributed ML research, geospatial modeling, and app/AI agent development. Seeking 2027 new-grad Data Engineering, Machine Learning, and Applied AI roles; available March 2027.

EDUCATION

UNIVERSITY OF WASHINGTON **Sep 2025 - Mar 2027**
M.S., Data Science (GPA: 3.86) | Seattle, WA | Expected March 2027

UNIVERSITY OF GEORGIA **Aug 2022 - May 2025**
B.S., Data Science | Minors: Statistics & Computer Science | Major GPA: 3.68 | Athens, GA
Dean's List: Spring 2023, Fall 2023, Spring 2024

EXPERIENCE

University of Washington - SEAL | Research Intern **Oct 2026 - Present**
- Support early-stage research through technical investigation, project review, and experimental validation at the Sensors, Energy, and Automation Laboratory.

Databricks Student Fellows Program | Student Fellow **Jun 2026 - Present**
- Build and present Python, SQL, Spark, and Databricks workflows for ingestion, transformation, validation, analytics, and ML; develop reusable technical demos for technical and mixed audiences.
- Selected for the student fellowship after a 1st-place Databricks × UW Hackathon finish; presented TerraCast at Data + AI Summit 2026.

Translation Commons | Volunteer Data Engineer **Jun 2026 - Sep 2026**
- Shipped **21 production data fixes across nine language groups**, correcting parent-child relationships in shared language datasets.
- Built a validation tool that surfaced **95 hierarchy inconsistencies** and added **nine unit tests** for override behavior and issue detection.

University of Georgia | Research Assistant - Federated & Distributed ML **Sep 2023 - Jan 2024**
- Implemented and evaluated **FedSVD and FedPower** with Python and TensorFlow across non-IID federated clients; analyzed convergence, accuracy, and communication/computation trade-offs against centralized baselines.

PROJECTS

TerraCast | Databricks × UW Hackathon - 1st Place **2026**
- Built Databricks pipelines integrating crop, weather, and climate data with Python, SQL, and Spark; contributed to LightGBM/Random Forest modeling and evaluation across **6,823 county-year/crop observations**.
- Historical county-held-out 5-fold CV recorded **0.8815 mean R^2**; a separate later walk-forward time CV recorded **0.8483**. Presented the team project at Data + AI Summit 2026.
- Contributed to tracing a pandas merge/index-alignment issue affecting stored predictions and anomaly counts while confirming fold-level CV R^2 was unaffected.

Darin | Founder / App & AI Agent Developer **Jun 2026 - Present**
- Develop the React Native/TypeScript app and AI agent workflows for an **iOS baby-care app in TestFlight beta**, including questions over care records, voice input, and five-language localization.
- Integrate the app with Supabase services for authentication, family access, synchronization, and private media; add failure-path tests for draft preservation, retries, and duplicate-save prevention.

WatchDawg | University of Washington team project **Sep 2025 - Dec 2025**
- Built Python and SQL workflows over **900K+ Seattle public-safety records** and interactive Dash/Plotly geospatial and time-series views with location, incident-type, and date filters.
- Used **SQLite date-range queries** and compact data types to manage memory in the hosted dashboard implementation.

Water Quality Prediction | EY 2026 Challenge **Jan 2026 - Mar 2026**
- Integrated **9,319 observations with 205 satellite, climate, hydrology, and geospatial features**; engineered environmental features and evaluated multi-stage models with spatial cross-validation.
- Final competition **leaderboard rank: 66; R^2: 0.4259**. The leaderboard result is separate from the spatial cross-validation evaluation.

SKILLS

Data Engineering: Python, SQL, Spark/PySpark, Databricks, Pandas, NumPy, ETL/data pipelines, data validation
Machine Learning: scikit-learn, PyTorch, TensorFlow, LightGBM, XGBoost, MLflow, model evaluation, federated ML
Software & Data Systems: TypeScript, React Native, PostgreSQL, MySQL, DuckDB, Supabase integration, Git, REST APIs
Visualization: Plotly, Dash | **Additional programming:** R, Java
